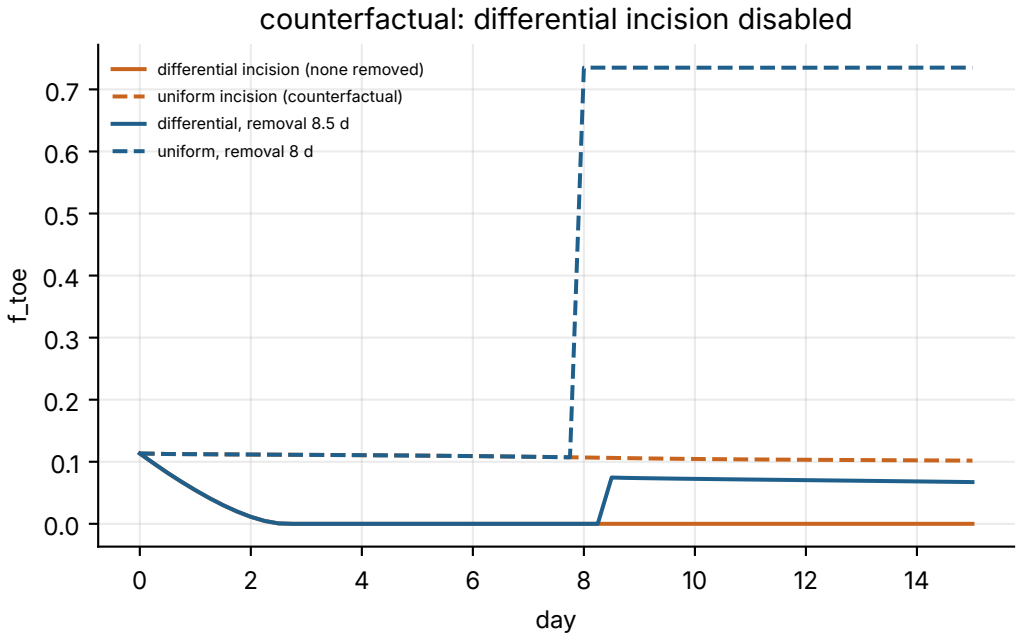
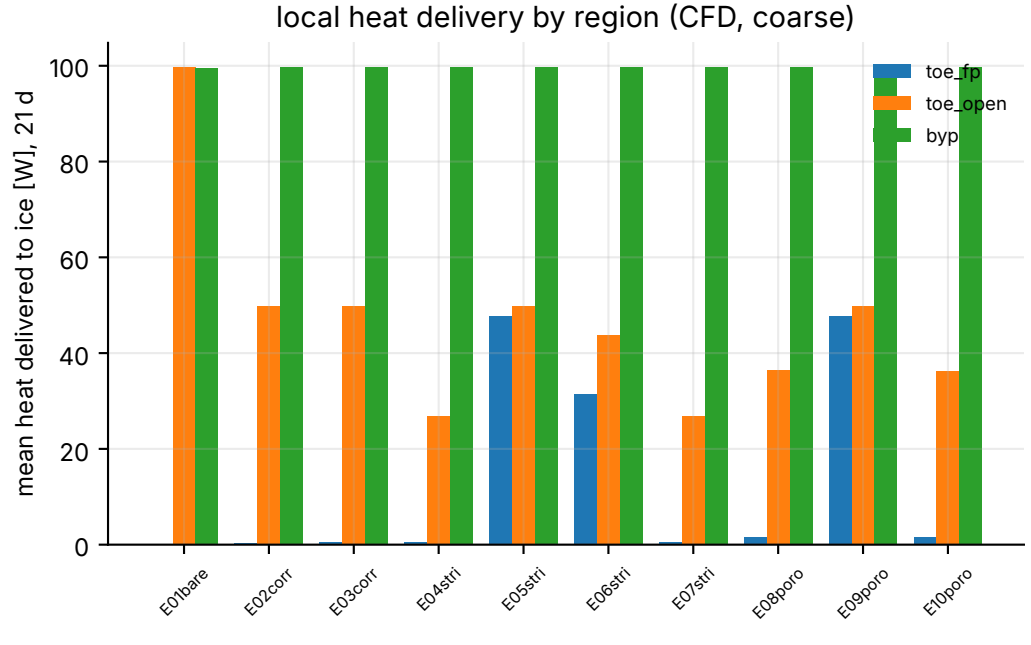
EVALUATION: removal-time boundary (idealised solid strip)
CFD medium: f at removal+1 d
reduced (frozen)
fixed-bed steady, dx=0.05
fixed-bed steady, dx=0.025
fixed-bed steady, dx=0.0125 (warm start)
toe-route flow fraction
prescribed removal day



counterfactual: differential incision disabled
differential incision (none removed)
uniform incision (counterfactual)
differential, removal 8.5 d
uniform, removal 8 d
f_toe
day



local heat delivery by region (CFD, coarse)
toe_fp
toe_open
byp
mean heat delivered to ice [W], 21 d
